

Precise™ for Databases and Storage

Performance Management for Enterprise Databases and Storage

Precise for Databases help ensure that your enterprise database environments remain available and operating at peak performance.

Precise products for different databases supports the leading database environments, including Oracle®, Microsoft SQL Server, IBM DB2, and Sybase.

Each Precise for Database suite is a comprehensive set of agent-based applications that operate on three levels:

1. Collecting data from application components to enable root cause drill-down for fast problem resolution, and providing proactive tuning intelligence to keep managed environments at optimal performance.
2. Correlating performance data from across the application, visualizing the end-to-end performance and isolating problem tiers and allowing management at the transaction level.
3. Storing and analyzing performance data to enable alerting, reporting, historic base-lining, and future-looking trend and capacity analysis.

Precise TPM

The Precise Transaction Performance Management (TPM) suite is an end-to-end system performance management platform that monitors, measures, analyzes, and tunes critical business systems from the end user (batch process, customer, partner, employee) to the physical data store. It alerts to performance problems and bottlenecks anywhere across the system and provides direct drill-down to pinpoint the root cause, keeping business-critical systems available and running at peak performance.

Precise's unique approach to Application Performance Management solutions help to optimize the performance and availability of enterprise applications. This helps identify and help correct performance problems before they affect your business, using agent-based and agent-less technologies as well as an overarching dashboard.

With more than 15 years of experience in application performance management, the Precise Application Performance Management solutions are proven in the market and are recognized as a leading offering. In addition, they deliver the broadest breadth and depth of platform coverage in terms of monitored applications databases and operating systems, supporting 3,000 application/operating system version combinations.

Benefits

» **MONITOR** and tune application performance continuously and proactively

» **USE** the dashboard to easily view statistical and current database activities

» **CORRELATE** rank, and compare performance metrics across multiple database instances

» **USE 'SQL TO SPINDLE'** drill-down for problem resolution

» **IDENTIFY** causes of locking and blocking issues in the database

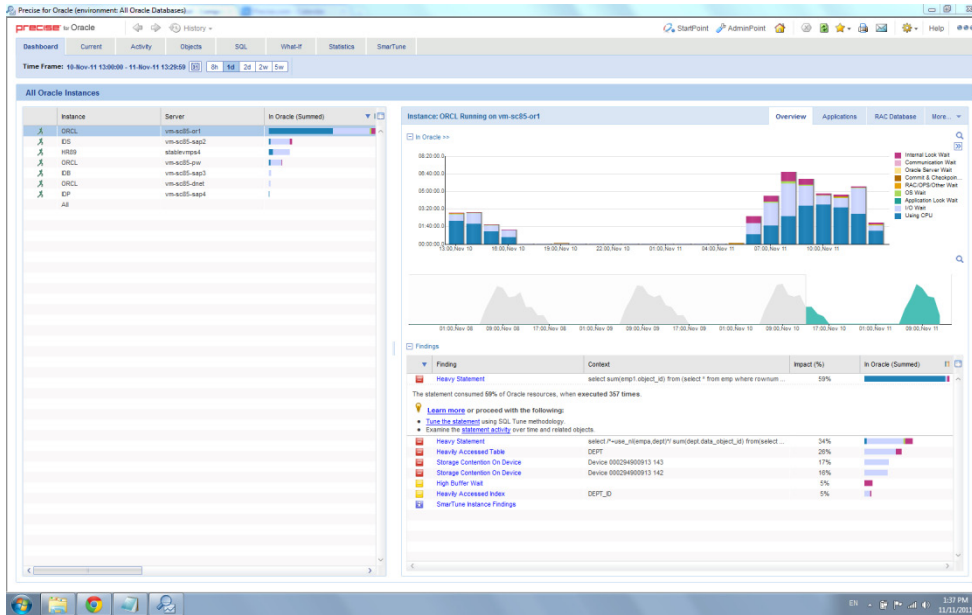

» **BREAK** performance data into narrow time slices

» **OBTAIN** expert tuning advice with priority ranking and relevant data displayed

» **AUTOMATICALLY** identify the major causes of performance problems for an SQL Server instance, and provide detailed explanations along with expert solution guidance

Precise for Oracle

Precise for Oracle is designed specifically to keep your Oracle environment available and performing at peak efficiency. This tool captures, measures, and analyzes performance metrics from all critical system components. It helps you detect and correct the root causes of problems in applications that rely on an Oracle database—before end users are affected. In addition Indepth for Oracle provides high-level visibility across multiple Oracle and Oracle RAC instances. It provides alerting to problems, reporting on collected data, and it maintains a Performance Warehouse of collected Oracle database performance data.

Check the overall health of all your Oracle instances

Precise for Microsoft SQL Server

Precise for Microsoft SQL Server gives you the ability to proactively monitor, analyze and tune SQL Server databases to keep Sharepoint instances or custom .NET applications available and performing at peak efficiency.

Precise for Sybase

Precise for Sybase gives database administrators (DBAs) the application performance management they need to proactively monitor, analyze, and tune Sybase instances, including Sybase Replication Servers. Like other Precise products for databases, Precise for Sybase identifies business application performance problems and helps to solve them. Precise for Sybase comes with useful “out of the box” reports for both technical and business users, enabling historic performance analysis and proactive research such as capacity planning.

System requirements

Precise for Databases supports the following Operating Systems:

Windows

Microsoft Windows

Sun Solaris

HP-UX

HP Tru64 UNIX

IBM AIX

Red Hat Linux

Consult our website <http://www.precise.com> for detailed information on Precise Transaction Performance Management, Precise for Databases or Precise for Storage Products.

Precise for DB2

Precise for DB2 enables you to proactively monitor, analyze and tune IBM DB2 Universal Database to keep your DB2 UDB-based applications available and performing at peak efficiency. Precise for DB2 UDB captures, measures, and correlates performance metrics from all crucial system components. These metrics give DBAs a complete view of application performance by and helps improve end-user response time while maximizing the return on technology investment. They also enable root-cause drill-down and expert tuning.

Precise Storage Extensions

Precise for Storage enable Precise Transaction Performance Management visibility to reach deep into the storage array. Precise for Storage collects performance metrics from leading storage equipment, including EMC Symmetrix® and CLARiiON®; IBM TotalStorage; HP StorageWorks XP; and Hitachi Data Systems Lightning, Thunder, and TagmaStore® Universal Storage Platform storage systems. By correlating this storage performance data with information collected by Precise for Oracle, SQL Server, and DB2, you can gain a complete and unprecedented view of your application performance “from user to spindle.”

Commitment, Focus, Experience

For over 15 years Precise Software Solutions has helped our Global 2000 customers manage business performance in complex, heterogeneous environments, assuring availability and business continuity. Precise offers a complete solution – from discovery through ongoing management – that allows our customers to focus on their core business.

We offer the broadest platform support, in terms of enterprise application, operating system, database, and development environment coverage. Precise is the solution of choice for IT as an organization-wide standard for application management.

About Precise

Precise delivers transaction transparency, fastest time to repair and game-changing problem prevention to customers worldwide. With Precise, business and IT can clearly see where critical transactions spend time and how well they are performing against business expectations, providing a whole new perspective on complex IT infrastructure.
